

gas spring "Click & Go"

Only one push on the release button...

The new click & go gas spring is a very comfortable alternative for all applications where the lockable gas spring shall always be pushed out completely after the release process. Due to the new click & go gas spring, this is possible with a single short push on the button. A permanent release over the whole stroke of the gas spring isn't necessary anymore. After a single release, the gas spring remains in released condition.

This gas spring type can, of course, be released by a hydraulic release system as well as by bowden wire. For further information about release systems and its respective connecting parts, please see our latest Website.

Facts:

- size : 8/28 or 10/28 mm
- force F1: up to 1300 N
- stroke: up to 700 mm
- CeramPro® piston rod, very corrosion-resistant
